Allowable Subject Matter

1. Claims 1-12 and 14-16 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The prior arts of record do not anticipate or render obvious to one skilled in the art a liquid crystal display comprising various elements as claimed, more specifically the second electrode having at least one elongate hole being supplied with a pixel voltage and a third electrode positioned under the at least one hole being supplied with a bias voltage wherein an interval between the bias voltage and the pixel voltage being at least two volts for preventing the liquid crystal molecules rotating reversely.
4. US 2003/0112397 (commonly assigned) discloses first, second and third electrodes wherein the third electrode is positioned under at least one hole of the second electrode and wherein the second electrode is supplied by a pixel voltage and third electrode being supplied by a bias voltage.. The newly cited reference USPAT 6,177,976 discloses a liquid crystal display device wherein a first electrode with an aperture is provided on at least one substrate and a second electrode is also provided on the same substrate as the first electrode in alignment with the electrode and a voltage higher than a voltage is applied between the electrode with the aperture and a counter electrode facing it is applied between the second electrode and the counter electrode, thereby controlling the rising direction of LC molecules. However, all the references fail to teach or suggest alone or in combination with any other prior art references the limitations such as wherein an interval between the bias voltage and the
